

# Grade 10 – IT 402

## Introduction to IT-ITeS Industry

# Objectives

- 1 Introduction to IT
- 2 Applications of IT
- 3 IT Enabled Services

# Introduction

Information and Communication Technology (ICT) is a broad field that encompasses the use of technology to manage and process information. It plays a crucial role in our modern, interconnected world. The goal is to equip students with essential skills and knowledge to navigate and contribute effectively to the digital age. ICT refers to the technologies used to handle telecommunications, broadcast media, audio-visual processing, and network-based control and monitoring functions. ICT refers to the technologies used to handle telecommunications, broadcast media, audio-visual processing, and network-based control and monitoring functions.

Recognizing the evolving nature of technology, students are encouraged to stay informed about emerging trends and adapt to changes in the ICT landscape.

- The Key components of ICT are Hardware, Software, Networking, Data and People.
- The Basic ICT Skills are Computer Literacy, Internet Skills, Typing and Keyboard Skills, Digital Citizenship.
- Applications of ICT are Communications, Productivity tools, Research and Information Retrieval, Creativity and Multimedia, Programming and Coding.

# Advantages of learning ICT Skills

- **Improved communication:** ICT makes it easy to stay in touch with people near and far, fostering collaboration and teamwork.
- **Enhanced creativity:** ICT tools like graphic design software and music production apps allow us to express ourselves in new and exciting ways.
- **Lifelong learning:** With access to online resources and educational platforms, learning can happen anytime, anywhere.
- **Better career opportunities:** Many jobs today require ICT skills, and knowing how to use technology can open doors to a wider range of career paths.

# Information Technology

**Information Technology** is the subset of Information and Communication Technology (ICT) that involves the use of Computers, networks, software, process, transmit, and retrieve information.

## Key Features of Information Technology

**Hardware:** Computers, servers, networking devices, and other physical equipment.

**Software:** Applications, operating systems, and programming languages.

**Networks:** Infrastructure for connecting and facilitating communication between devices.

**Databases:** Storage systems for organizing and retrieving data efficiently.

# Basic IT Skills

**Computer Operations:** Understanding the basic functions of computers, including turning them on/off, using peripherals, and managing files and folders.

**Software Applications:** Proficiency in using common software like word processors, spreadsheets, and presentation tools.

**Internet Navigation:** Efficient use of web browsers, search engines, and online resources.

**Troubleshooting:** Basic problem-solving skills for identifying and resolving common hardware and software issues.

# Applications of IT

It is used in Business and Enterprise Systems, Communication and Collaboration, Data Management and Analytics, E- Commerce, Healthcare Informatics, Education Technology, Financial Technology, Government and Public Services, Entertainment and Media, Cybersecurity, Robotics and Animation.

- **IT in home**

IT has revolutionized home computing by providing more powerful and user-friendly devices, connectivity options, and a wide range of applications and services that cater to various needs and preferences. The integration of smart technologies and the expansion of cloud computing have further enhanced the overall home computing experience.

- **IT in Banking**

Information Technology, is like the backbone of modern banking. It's the technology that keeps things running smoothly and helps banks thrive in today's world.

- **IT in Medical Science & Health Care**

Information Technology (IT) plays a tremendously important role in both medical science and healthcare. It has revolutionized how we research, diagnose, treat, and manage health, impacting various aspects of the medical field.

- **IT in E-Governance & Public Sector**

Digital India and E-Governance initiatives of the government have helped many government services to be online. Linking of Pan Card to bank account, collection of taxes, processing of documents like License, Passports, Voter Id Card etc.

## **IT in Medical Science & Health Care**

Information Technology Enabled Services (ITeS) refer to the application of Information Technology to deliver various services that support business, processes and operations. These services are often delivered remotely using technology, and they play a significant role in today's globalized economy. The skills required in ITeS are Communication Skills, Technical Proficiency, Problem Solving, Data Management.

# Key Components of ITeS

**Customer Support:** Providing assistance to customers through various channels, such as phone, email, chat, or social media.

**Data Entry and Processing:** Handling and processing data efficiently and accurately.

**Technical Support:** Assisting users with technical issues related to software, hardware, or other IT Products

**Business Process Outsourcing (BPO):** Outsourcing specific business processes to external service providers.

# Common ITeS Functions

**Call Centers:** Handling inbound and outbound calls to address customer queries, provide information, or offer support.

**Data Entry Services:** Inputting, processing, and managing data in digital formats..

**Tech Support Services:** Resolving technical issues faced by customers or end-users.

**Back Office Operations:** Supporting internal business processes such as finance, HR and administrative tasks.

# Role of ITeS in Business

**Efficiency:** ITeS can improve the efficiency of business operations by outsourcing non-core functions, allowing companies to focus on their core competencies.

**Cost Savings:** Outsourcing ITeS functions can lead to cost savings for businesses.

**Globalization:** ITeS allows companies to access a global talent pool, enabling them to operate on a larger scale.

A top-down view of a clean, white desk. In the top left corner is a small potted plant with green leaves. To its right is a silver laptop, partially visible, showing the keyboard and trackpad. In the center of the desk is an open notebook with blank white pages. To the left of the notebook is a black smartphone. To the right of the notebook is a yellow pencil and a pair of black-rimmed glasses. The text "Intellectual Skill Sheet" is written in large, bold, red letters across the center of the notebook pages.

# Intellectual Skill Sheet

# Multiple Choice Questions

1. The Key Components of ICT are \_\_\_\_\_ [     ]  
a. Hardware                      b. Software                      c. Networking                      d. All of these
2. Information Technology is used in \_\_\_\_\_ [     ]  
a. Cyber Security                      b. E-Commerce                      c. Health Care                      d. All of these
3. Which of the following are the categories of ITeS? [     ]  
a. BPO                                      b. BPM                                      c. MNC                                      d. ISP
4. The skills required in ITeS are \_\_\_\_\_ [     ]  
a. Problem Solving                      b. Technical Proficiency                      c. Communication Skills                      d. All of these
5. The outsourced services mainly focusing on knowledge based activities such as data analytics, marketing research etc. are known as [     ]  
a. BPO                                      b. RPO                                      c. KPO                                      d. CRM

# Fill in the Blanks

1. The full form of ITeS \_\_\_\_\_.
2. \_\_\_\_\_ plays an important role in both medical sciences and Health Care.
3. \_\_\_\_\_ is used to equip students with essential skills and knowledge to contribute efficiently to digital age.
4. The full form of BPO \_\_\_\_\_.
5. \_\_\_\_\_ is the backbone of modern banking.

# True or False

1. Information Technology (IT) means creating, managing, storing and exchanging information. [     ].
2. ICT Stands for Information Communication and Technology. [     ]
3. Information Technology is not a subset of ICT. [     ]

# Answer the following Questions

1. What is Ites?
2. List some applications of IT.
3. How is IT useful in home computing.
4. What is the role of ITeS in business.
5. How are IT and IteS interrelated.

# SKILL SHEET KEYS

## Multiple Choice Questions

1. d      2. d      3. a      4. d      5. a

## Fill in the blanks

- |                                            |                                 |
|--------------------------------------------|---------------------------------|
| 1. Information Technology Enabled Services | 2. Information Technology       |
| 3. Information Technology                  | 4. Business Process Outsourcing |
| 5. Information Technology                  |                                 |

## True or False

1. True      2. True      3. False

# SKILL SHEET KEYS

## Answer the following questions

- 1A.** Information Technology Enabled Services (ITes) refer to the application of information technology to deliver various services that support business, process and operations. These services are often delivered remotely using technology and they play a significant role in today's globalized ceremony.
- 2A.** It is used in Business and Enterprise Systems, Communication and Collaboration, Data Management and Analytics, E-Commerce, Healthcare Informatics, Education Technology, Financial Technology, Government and Public Services, Entertainment and Media, cyber security, Robotics and Animation.
- 3A.** IT has revolutionized home computing by providing more powerful and user-friendly devices, connectivity options and a wide range of applications and services that cater to various needs and preferences. The integration of smart technologies and the expansion of cloud computing have further enhanced overall home computing experience.

# SKILL SHEET KEYS

**4A. Efficiency:** ITes can improve the efficiency of business operations by outsourcing non-core functions, allowing companies to focus on their core competencies.

**Cost Savings:** Outsourcing ITes functions can lead to cost savings for businesses.

**Globalization:** ITes allows companies to access a global talent pool, enabling them to operate on a larger scale.

**5A.** 1) IT provides the technology and infrastructure (computers, networks, software) needed to deliver ITes.

2) ITes relies on IT to operate efficiently, enabling businesses to outsource or automate services.

3) IT and ITes together help organizations reduce costs, improve efficiency, and focus on core activities by leveraging technology-enabled services.

**6A.** Business Process Outsourcing, or BPO, means giving some business work to another company to do it for you. These companies are called service providers.

(a) Financial and Accounting Services – Managing accounts, salaries, and payments.

(b) Taxation and Insurance Services – Handling tax and insurance-related work.

(c) E-Publishing and Web Promotion – Creating online books, blogs, and promoting websites.

(d) Legal Services and Content Writing – Writing legal documents and articles.

(e) Multimedia and Design Services – Creating designs, animations, and videos.

(f) Document Management Services – Storing and organizing company documents.

(g) Software Testing Services – Checking if software works properly before use.

(h) Health Care Services – Managing patient records and health-related information.

# SKILL SHEET KEYS

## 7A. The main types of organizations in the IT-BPM industry

### (a) Multinational Companies (MNCs)

These are big companies that have their main office in another country, but also work in many other countries, including India. They provide services to both Indian and foreign clients.

Example: Companies like IBM or Accenture have offices in India but their headquarters are abroad.

### (b) Indian Service Providers (ISPs)

These companies were started in India and have their headquarters here. Many of them have opened offices in other countries too. They provide services to clients in India and around the world.

Example: Infosys, TCS, and Wipro are Indian companies that work with clients worldwide.

### (c) Global In-house Centers (GICs)

These are special units of a parent company that handle only their own company's IT and business needs. They do not serve outside clients. This setup helps companies save money, improve quality, and expand globally.

Example: A U.S. bank may set up its own IT center in India to manage its computer systems and data.

THANK YOU
